FORTRESS INTERLOCKS

Operating Instructions: Key Operated Switch

Gard

The S Unit / S-EM / S-WP is suitable for isolation or switching current and may be used to isolate power to machinery during access. Direct drive operation - positively opens contacts The standard sequence is: Key trapped - Power on Key free - Power off Available as 20A, 32A & 63A variant Most common contact arrangements are 2NO2NC & 40NO. Other contact arrangements available on request Lock mounted through hole in panel S-EM: Robust metal enclosure for standalone mounting IP67 rated 2 x M20 cable entry conducts at base of unit S-WP: Seal rated to IP66 Seal r	Description	S Unit	S-EM

by competent and qualified personnel who have read and understood the whole of this document prior to commencing installation. Any modification to or deviation from these instructions invalidates all warranties. Fortress Interlocks Ltd accepts no liability whatsoever for any situation arising from misuse or mis-application of this product. This product is not to be used as a Mains Isolator or Emergency Stop. The unit is a component to be added to a permanent electrical installation meeting the requirements of the applicable IEC/EN standards. The voltages used on the S terminals must all be of the same type. i.e. ALL Harzardous Live or ALL Machine Extra Low Voltage.

IF YOU HAVE ANY QUESTIONS OR QUERIES OF ANY NATURE PLEASE CONTACT THE SUPPLIER WHO WILL BE PLEASED TO ADVISE AND ASSIST.

It is the user's responsibility to implement proper management controls and risk assessment for master and spare keys, without which they can be used to defeat trapped key interlock systems; ISO/TS 19837 can offer further guidance.

Technical Specifications	S Unit	S-EM	S-WP
Mounting Plate	Stainless Steel	Die-cast zinc for A02040 & A02022 Stainless Steel for all other units	Plastic injection moulding with integrated O-Ring seal.
Ingress Protection	-	IP67	IP66
Lock Mechanism	Die-cast zinc body with sta separately)	ainless steel operating mechani	sm or full stainless steel (selected
Кеу	Stainless steel (selected s	separately)	
Minimum Operating Current	5mA at 20v		

Safety Data			
Standards	EN138 EN138	N14119:2013 349-1:2008 349-2:2012 061:2005	
Certifications	CE ma	CE marked for all applicable directives	
Category	Cat. 4,	at. 4, PLe (EN/ISO 13849-1) and SIL3 (EN/IEC 62061)	
Functional cofety data	B10d	5,000,000	
Functional safety data	DC	High 99% (with correct monitoring)	

Standard Functionality

Mount these units well away from sources of vibration or use anti-vibration mountings in order to avoid the effects of vibration, shock and bump.

Electrical Connection

Check that the unit to be installed is of the same electrical type and voltage rating as the machine control circuits. Note that all units are designed to operate at +/-10% of the nominal supply voltage. The use of an incorrect voltage can seriously damage the unit. The electrical system must incorporate fuse protection for all circuits, using a Quick-Acting (F) fuses, to IEC 127. Please refer to figure 1 for the Terminal Numbers for the Key Operated Rotary Switch. Bond the unit to Earth potential via the Earth point provided. The earth wire used must be multi-stranded Yellow and Green PVC sheathed and approved to IEC with minimum conductor cross-sectional area. The Earth lead must be fitted such that it will be the last to be broken if the wiring loom is pulled from the product When all wiring is complete, conduct a Protective Earth Test to IEC, clause 20. Test the unit for correct operation.
